

Pump Eaters Attacking Your Site?

QED AutoPumps® are engineered for the tough conditions that eat up other pumps

Corrosives such as chlorides or low pH? Viscous fluids or suspended solids? Flammable or explosive hydrocarbons, aggressive solvents, high temperature liquids...?

QED's AutoPump product line was designed from the start for tough challenges at landfills and remediation sites, engineered to perform in conditions that can damage other pumps prematurely. Just connect the AutoPump to a compressed air supply and it starts pumping – no separate control box or level probes are needed. These automatic pumps deliver up to 20,000 GPD of contaminated ground water, landfill leachate or condensate, backed by warranties to 5 years. Even extreme solids levels won't damage an AutoPump; simple maintenance quickly returns them to service. To meet your project objectives with lower O&M costs, try the original AutoPump.

EXPERT ASSISTANCE FROM QED's AUTOPUMP TEAM

After over 25 years of supplying pumps for thousands of successful projects, we likely already have experience at a site similar to yours. Our applications specialists can help you put together a solution today, with specifications you can insert into your proposal, as well as a complete price quote within 24 hours.
