AutoPump® Catalog

- The Original Automatic Air-Powered Pumps now including the new low-maintenance AP4 Ultra
- Top Choice at Remediation and Landfill Sites Around the World
- Complete Systems

QED
Innovative Environmental Products

Featuring the AP4+ Series and the new low-maintenance AP4 Ultra
Automatic air-powered pumps offer exceptional capabilities in the severe pumping conditions found at many landfill and remediation sites. QED’s AutoPump® (U.S. Patent Number 5,004,405) pumps originated the automatic air-powered pump concept in 1986 and have lead the industry ever since. AutoPumps were designed specifically to handle difficult conditions reliably and safely, including, hydrocarbons, landfill leachates and condensates, solvents, suspended solids, silts, corrosives, and high viscosities, along with high temperatures and frequent starts and stops. Air-powered AutoPumps are proven worldwide at thousands of sites, which is why AutoPumps are the No. 1 choice of professionals based on reliability, durability, performance range, and technical support.

The superiority of the AutoPump design is based on four key strengths:
- high clearance fluid pathways
- using air as the motive force
- materials of construction matched to site conditions
- a simple yet rugged operating mechanism

Unlike electric pumps, air-powered AutoPumps use no high-speed motors, bearings or impellers, so AutoPumps don’t heat up, seize up, or get ground up. Liquid shearing is typical of electric pumps, creating oil-water emulsions that reduce the performance of downstream treatment equipment. AutoPumps cause far less liquid shearing than electric submersible pumps so downstream treatment systems can perform better. Air-powered also means eliminating the dangers and costs of electricity at and in the well. Finally, AutoPumps actually have a built-in control system – they pump when there is liquid present and shut down when the level is drawn down, without the need for any sensors in the well or controls at the surface.

Application Excellence
Remediation applications and landfill fluids pumping are very challenging. QED is dedicated to providing a comprehensive approach to meeting the specific needs of each site and well, taking into account many factors beyond just flow rate and depth, such as:
- Preferred inlet position number – top or bottom
- Pump length to match water column and meet drawdown requirements
- A broad range of materials of construction to match fluid properties and temperature
- Jacketed tubing sets, bundled hose and quick-connect options to ease installation and service
- A wide variety of standard and custom wellhead completions to fit site needs

Experience and Expertise
The AutoPump specialists at QED have unsurpassed experience in both typical and special applications, providing the quality and care that makes a difference. Call us at 1-800-624-2026 for prompt, professional assistance, or visit our web site at www.qedenv.com to access product and application information.

AutoPump®
How AutoPumps Work

AutoPump Reliability
The AutoPump® air-powered pump operating cycle diagrams and explanation above tell just part of the story of AutoPump technology. Engineering an automatic pump to function in clear water is just the start. The real secrets of AutoPump durability and reliability are based on over 18 years of site experience in difficult pumping applications. AutoPumps are designed to resist chemical attack, abrasive wear, mechanical wear, solids deposits, viscous fluids and elevated temperatures. The entire air valve control mechanism has been refined in many subtle ways to survive these severe pumping conditions, using special materials, tolerances, and safety factors to provide years of trouble-free cycling. And, now there is the new AutoPump AP4 Ultra, which uses proprietary non-stick finishes on the float and discharge tube to help reduce solid buildups, extending the time between cleaning and making it much faster and easier to clean the pump. AutoPumps are the first of their kind, first in design experience, and first in reliability and durability.
AutoPump®

Why AutoPumps Are Better

QED-developed unique Easy Fittings™ Quick-Release Connectors
For quick disconnect/reconnect without the need to shorten pump tubing or remove/replace tubing clamps.

Superior float. Light weight, won't corrode, won't dent.

Same standard 5-year warranty. No other pneumatic pump manufacturer even comes close.

Maximum flow rate over 14 gpm.

Easy pump disassembly. Removing four bolts allows removal of the pump casing.

QED originated the concept of jacketed tubing to make pump installation/removal easier.

The same time-proven, reliable, air valve assembly that has made the AP4+ the industry's preferred choice since 1986.

Air efficiency saves up to $300/year in energy costs compared to other pneumatic pumps.

Superior materials choice. Most of the AutoPump's internal components are available in a variety of materials to fit site-specific conditions.

Superior float.

Easily removable float retainer.

Inlet check plug design durability has been proven at thousands of sites in over 40 countries.

Easy O-ring fit due to precision tolerance casing ID.

QED originated the concept of jacketed tubing to make pump installation/removal easier.
Quick Guide to AutoPump Selection
An important advantage of an AutoPump® (U.S. Patent Number 5,004,405) air-powered Pump system is the wide range of choices to truly match site needs. Below is a quick guide to the major configurations and options offered in the AutoPump line, to help you determine which models are best for your project. Of course, you can just call us at 1-800-624-2026, or email us at info@qedenv.com, for fast, personal service by our application specialists.

As a general guideline, pump model selection is usually based on the following primary application criteria. They are presented in the common sequence of consideration, but special site needs may alter the priority.

- **Maximum Flow and Depth** – pump model, depth, submergence, and drive pressure determine the maximum flow rate that can be achieved; see specific pump curves for detailed flow information
- **Pump Diameter** – to fit the well ID; also, larger diameter pumps deliver higher flow rates, all other factors being equal
- **Inlet Position** – top or bottom inlet; a top inlet enhances removal of LNAPLs, while bottom inlets provide the highest flow rates and greatest solids-handling capacity for DNAPL, and landfill fluids
- **Actuation Level** – minimum height of liquid needed to actuate the pump, also equal to the minimum drawdown level; low-drawdown models are optimized for maximum drawdown
- **Materials of Construction** – many models are available in upgraded materials for special applications, such as extremes of pH, suspended solids, high temperatures, and aggressive solvents. The new low-maintenance AutoPump AP4 Ultra uses special non-stick finishes on the float and discharge tube. All metallic parts are 316-grade stainless steel, allowing for greater corrosion resistance.

**Basic Pump Systems**

**Basic System Bottom Inlet Pump**

**Basic System Top Inlet Pump**
The AutoPump AP4 Ultra Bottom Inlet Long provides maximum capabilities and flow in a bottom inlet pump for 4” (100 mm) diameter and larger wells. The base model delivers flow rates up to 14 gpm (53 lpm)*. The AP4 Ultra uses proprietary non-stick finishes on the float and discharge tube to reduce solids buildup, extending the time between cleaning and making it much faster and easier to clean the pump. All metallic parts are 316-grade Stainless Steel, which has greater corrosion resistance and can withstand attacks of the harshest leachate. The AP4.0 Bottom Inlet Long pump is complemented by the most comprehensive selection of accessories to provide a complete system to meet site-specific requirements. Call QED for prompt, no-obligation assistance on your pumping project needs.

**Advantages**

1. The original automatic air-powered well pump, proven worldwide over 30 years.

2. Proprietary finishes extend the time between cleaning.

3. All metallic parts are 316-grade SS for better corrosion resistance.

4. New and improved valve stem connections have no fasteners, or cotter pins. Exhaust seat is easy to adjust.

5. Five-year warranty.

#### Standard Construction Materials

- **Pump Body**: Fiberglass or Stainless Steel  
- **Pump Ends**: 316 Stainless Steel  
- **Internal Components**: 316 Stainless Steel, Viton, PVDF³  
- **Tube & Hose Fittings**: 316 Stainless Steel  
- **Fitting Type**: Barbs or Quick Connects or Easy Fittings

#### Tube & Hose Options

- **Tubing Material**: Nylon  
- **Sizes - Liquid Discharge**: 1 in. (25 mm) or 1-1/4 in. (32 mm) OD  
- **Pump Air Supply**: 1/2 in. (13 mm) OD  
- **Air Exhaust**: 5/8 in. (16 mm) OD  
- **Hose Material**: Nitrile  
- **Sizes - Liquid Discharge**: 3/4 in. (19 mm) or 1 in. (25 mm) ID  
- **Pump Air Supply**: 3/8 in. (9.5 mm) ID  
- **Air Exhaust**: 1/2 in. (13 mm) ID

1 Material upgrades available  
2 Applies to QED supplied tubing; other tubing sources may not conform to QED fittings.  
3 PVDF - Polyvinylidene Fluoride

### Application Limits (Base model)

AutoPump AP4 Ultra pumps are designed to handle the application ranges described below. For applications outside these ranges, consult QED about AP4 upgrades.

**Description**

The AutoPump® AP4 Ultra Bottom Inlet Short provides maximum capabilities and flow in a bottom inlet pump for 4” (100 mm) diameter and larger wells with shorter water columns and/or the need to pump down to lower water levels, compared to full-length pumps, and it can deliver flow rates up to 13 gpm (49 lpm)*. The AP4 Ultra uses proprietary non-stick finishes on the float and discharge tube to reduce solids buildup, extending the time between cleaning and making it much faster and easier to clean the pump. All metallic parts are 316-grade Stainless Steel, which has greater corrosion resistance and can withstand attacks of the harshest leachate. The AP4.0 Bottom Inlet Short pump is complemented by the most comprehensive selection of accessories to provide a complete system to meet site-specific requirements. Call QED for prompt, no-obligation assistance on your pumping project needs.

**The AutoPump Heritage**

The AutoPump AP4 Ultra Bottom Inlet Short is part of the famous AutoPump family of original automatic air-powered pumps, developed in the mid 1980s specifically to handle unique pumping needs at remediation and landfill sites. Over the years they’ve proven their durability at thousands of sites worldwide. AutoPumps are designed to handle difficult pumping challenges that other pumps can’t, such as hydrocarbons, solvents, suspended solids, corrosives, temperature extremes, viscous fluids and frequent start/stop cycles. Beyond just the pump, AutoPump systems offer the most complete range of tubing, hose, connectors, wellhead caps and accessories to help your installation go smoothly. This superior pumping heritage, application experience and support back up every AutoPump you put to work on your project.

AutoPump® AP4 Ultra

Max. Flow 9 gpm (34 lpm)

O.D. 3.6 in. (9.1 cm)

Length 45 in. (110 cm)

Description
The AutoPump AP4 Ultra Top Inlet Short provides maximum capabilities and flow in a top inlet pump for 4" (100 mm) diameter and larger wells with shorter water columns and the need for an elevated inlet, such as pumping total fluids from wells contaminated with LNAPLS, and it can deliver flow rates up to 9 gpm (34 lpm)*. The AP4 Ultra uses proprietary non-stick finishes on the float and discharge tube to reduce solids buildup, extending the time between cleaning and making it much faster and easier to clean the pump. All metallic parts are 316-grade Stainless Steel, which has greater corrosion resistance and can withstand attacks of the harshest leachate. The AP4.0 Top Inlet Short pump is complemented by the most comprehensive selection of accessories to provide a complete system to meet site-specific requirements. Call QED for prompt, no-obligation assistance on your pumping project needs.

The AutoPump Heritage
The AutoPump AP4 Ultra Top Inlet Short is part of the famous AutoPump family of original automatic air-powered pumps, developed in the mid 1980s specifically to handle unique pumping needs at remediation and landfill sites. Over the years they've proven their durability at thousands of sites worldwide. AutoPumps are designed to handle difficult pumping challenges that other pumps can't, such as hydrocarbons, solvents, suspended solids, corrosives, temperature extremes, viscous fluids and frequent start/stop cycles. Beyond just the pump, AutoPump systems offer the most complete range of tubing, hose, connectors, wellhead caps and accessories to help your installation go smoothly. This superior pumping heritage, application experience and support back up every AutoPump you put to work on your project.

Advantages
1. The original automatic air-powered well pump, proven worldwide over 30 years.
2. Proprietary finishes extend the time between cleaning.
3. All metallic parts are 316-grade SS for better corrosion resistance.
4. New and improved valve stem connections have no fasteners, or cotter pins. Exhaust seat is easy to adjust.
5. Five-year warranty.

*Consult QED for higher flow requirements

Description

Advantages

1. The original automatic air-powered well pump, proven worldwide over 25 years
2. The highest flow rates and deepest pumping capabilities in the industry
3. Patented, proven design for superior reliability and durability, even in severe applications
4. Handles solids, solvents, hydrocarbons corrosive conditions, viscous fluids and high temperatures beyond the limits of electric pumps
5. Five-year warranty

**Description**

The AP4+ Bottom Inlet Short AutoPump provides maximum capabilities and flow in a bottom inlet pump for 4” (100 mm) diameter and larger wells with shorter water columns and/or the need to pump down to lower water levels, compared to full-length pumps. It is offered in optional versions to handle even the most severe remediation and landfill pumping applications, and delivers flow rates up to 13 gpm (49 lpm)*. The AP4+ Short Bottom Inlet AutoPump is complemented by the most comprehensive selection of accessories to provide a complete system to meet site-specific requirements. Call QED for prompt, no-obligation assistance on your pumping project needs.

**The AutoPump Heritage**

The AP4+ Bottom Inlet Short AutoPump is part of the famous AutoPump family of original automatic air-powered pumps, developed in the mid 1980s specifically to handle unique pumping needs at remediation and landfill sites. Over the years they’ve proven their durability at thousands of sites worldwide. AutoPumps are designed to handle difficult pumping challenges that other pumps can’t, such as hydrocarbons, solvents, suspended solids, corrosives, temperature extremes, viscous fluids and frequent start/stop cycles. Beyond just the pump, AutoPump systems offer the most complete range of tubing, hose, connectors, wellhead caps and accessories to help your installation go smoothly. This superior pumping heritage, application experience and support back up every AutoPump you put to work on your project.

**Advantages**

1. The original automatic air-powered well pump, proven worldwide over 25 years

2. The highest flow rates and deepest pumping capabilities in the industry

3. Patented, proven design for superior reliability and durability, even in severe applications

4. Handles solids, solvents, hydrocarbons corrosive conditions, viscous fluids and high temperatures beyond the limits of electric pumps

5. Five-year warranty

*Consult QED for higher flow requirements
## Bottom Inlet, Short

### Pump Dimensions

- **Liquid Discharge**: Length 39.3 in. (100 cm)
- **Exhaust**: Actuation Level 26.7 in. (68 cm)
- **Inlet**: O.D. 3.6 in. (9.1 cm)

- **Pump Ends**: Stainless Steel
- **Internal Components**: Stainless Steel, Viton, PVDF
- **Tube & Hose Fittings**: Brass or Stainless Steel
- **Fitting Type**: Barbs or Quick Connects

#### Tube & Hose Options
- **Tubing Material**: Nylon
- **Sizes - Liquid Discharge**: 1 in. (25 mm) or 1-1/4 in. (32 mm) OD
- **Pump Air Supply**: 1/2 in. (13 mm) OD
- **Air Exhaust**: 5/8 in. (16 mm) OD
- **Hose Material**: Nitrile
- **Sizes - Liquid Discharge**: 3/4 in. (19 mm) or 1 in. (25 mm) ID
- **Pump Air Supply**: 3/8 in. (9.5 mm) ID
- **Air Exhaust**: 1/2 in. (13 mm) ID

---

### Application Limits (Base model)

AP4+ AutoPumps are designed to handle the application ranges described below. For applications outside these ranges, consult QED about AP4 upgrades.

- **Maximum Temperature**: 150° F (65° C)
- **pH Range**: 4-9
- **Solvents and Fuels**: diesel, gasoline, JP1-JP6, #2 heating oils, BTEX, MTBE, landfill liquids

---

Long and Short AP4+ AutoPumps are warranted for five (5) years: 100% materials and workmanship.

Low-Drawdown AutoPumps are warranted for one (1) year: 100% materials and workmanship.

Description

The AP4+ Low-Drawdown Bottom Inlet AutoPump provides maximum capabilities and flow in a bottom inlet pump for 4" (100 mm) diameter and larger wells with very short water columns and/or the need to pump down to as low as 15.3" (39 cm) above the bottom. It is offered in optional versions to handle even the most severe remediation and landfill pumping applications, and delivers flow rates up to 7 gpm (26.5 lpm). The AP4+ Low Drawdown Bottom Inlet AutoPump is complemented by the most comprehensive selection of accessories to provide a complete system to meet site specific requirements. Call QED for prompt, no-obligation assistance on your pumping project needs.

The AutoPump Heritage

The AP4+ Low-Drawdown Bottom Inlet AutoPump is part of the famous AutoPump family of original automatic air-powered pumps, developed in the mid 1980s specifically to handle unique pumping needs at remediation and landfill sites. Over the years they’ve proven their durability at thousands of sites worldwide. AutoPumps are designed to handle difficult pumping challenges that other pumps can’t, such as hydrocarbons, solvents, suspended solids, corrosives, temperature extremes, viscous fluids and frequent start/stop cycles. Beyond just the pump, AutoPump systems offer the most complete range of tubing, hose, connectors, wellhead caps and accessories to help your installation go smoothly. This superior pumping heritage, application experience and support back up every AutoPump you put to work on your project.

Advantages

1. The original automatic air-powered well pump, proven worldwide over 25 years

2. The highest flow rates and deepest pumping capabilities in the industry in a low drawdown bottom-fill pump

3. Patented, proven design for superior reliability and durability, even in severe applications

4. Handles solids, solvents, hydrocarbons corrosive conditions, viscous fluids and high temperatures beyond the limits of electric pumps

5. One-year warranty

Max. Flow 7.0 gpm (26.5 lpm)

Description
The AP3B Bottom Inlet Long AutoPump is designed for moderate-duty remediation pumping applications with well casings 3" (75 mm) diameter and larger. Call QED for prompt, no-obligation assistance on your pumping project needs.

The AutoPump Heritage
The AP3B Bottom Inlet Long AutoPump is part of the famous AutoPump family of original automatic air-powered pumps, developed in the mid 1980s specifically to handle unique pumping needs at remediation and landfill sites. Over the years they’ve proven their durability at thousands of sites worldwide. AutoPumps are designed to handle difficult pumping challenges that other pumps can’t, such as solvents, suspended solids, corrosives, temperature extremes, viscous fluids and frequent start/stop cycles. Beyond just the pump, AutoPump systems offer the most complete range of tubing, hose, connectors, caps and accessories to help your installation go smoothly. This superior pumping heritage, application experience and support back up every AutoPump you put to work on your project.

Advantages
1. Based on the original automatic air-powered well pump, proven worldwide over 25 years
2. Competitive flow rates and pumping capabilities
3. Patented, proven design for superior reliability and durability
4. Handles solids, some solvents, hydrocarbons and corrosive conditions beyond the limits of electric pumps
5. Two-year warranty
### Application Limits

AP3 AutoPumps are designed to handle the application range described below. For applications outside this range, consider the AP4 and AP2 models.

- Maximum Temperature: 120°F (49°C)
- pH Range: 4-9
- Some solvents and Fuels: gasoline, diesel fuel, BTEX, MTBE

The AP3 Bottom Inlet Short AutoPump is designed for moderate-duty remediation pumping applications with well casings 3” (75 mm) diameter and larger. It is designed for wells having shorter water columns and/or the need to pump down to lower water levels, compared to full-length pumps. Complete system components such as tubing and hose sets, well caps, and flow counters are available for the AP3 Long Bottom Inlet AutoPump. Call QED for prompt, no-obligation assistance on your pumping project needs.

Description
The AP2 Top Inlet Long AutoPump provides maximum capabilities and flow in a top inlet pump for 2” (50 mm) diameter wells requiring an elevated inlet, such as pumping total fluids from wells contaminated with LNAPLs. It is offered in optional versions to handle even severe remediation and landfill pumping applications, and delivers flow rates up to 1.9 gpm (7.2 lpm). The AP2 Long Bottom Inlet AutoPump is complemented by the most comprehensive selection of accessories to provide a complete system to meet site-specific requirements. Call QED for prompt, no-obligation assistance on your pumping project needs.

The AutoPump Heritage
The AP2 Top Inlet Long AutoPump is part of the famous AutoPump family of original automatic air-powered pumps, developed in the mid 1980s specifically to handle unique pumping needs at remediation and landfill sites. Over the years they’ve proven their durability at thousands of sites worldwide. AutoPumps are designed to handle difficult pumping challenges that other pumps can’t, such as solvents, suspended solids, corrosives, temperature extremes, viscous fluids and frequent start/stop cycles. Beyond just the pump, AutoPump systems offer the most complete range of tubing, hose, connectors, caps and accessories to help your installation go smoothly. This superior pumping heritage, application experience and support back up every AutoPump you put to work on your project.

Advantages
1. The original 2” automatic air-powered well pump, proven worldwide over 15 years
2. The industry leader in reliability, durability, flow rate and depth capability in an automatic pump for 2-inch wells
3. Handles solids, hydrocarbons, solvents, corrosive conditions, viscous fluids and landfill liquids
4. One-year warranty

STANDARD LITER OF AIR PER 2.2

APPROXIMATE STANDARD LITER OF AIR PER LITER PUMPED (STD L/LITER)
Description

The AP2 Top Inlet Short AutoPump provides maximum capabilities and flow in a top inlet pump for 2" (50 mm) diameter wells having shorter water columns and/or the need to pump down to lower water levels, compared to full-length pumps. It is designed for applications requiring an elevated inlet, such as pumping total fluids from wells contaminated with LNAPLs. It is offered in optional versions to handle even the most severe remediation and landfill pumping applications, and delivers flow rates up to 1.6 gpm (6 lpm). The AP2 Long Bottom Inlet AutoPump is complemented by the most comprehensive selection of accessories to provide a complete system to meet site-specific requirements. Call QED for prompt, no-obligation assistance on your pumping project needs.

2355 Bishop Circle West    Dexter, MI 48130   USA
QED offers the choice of jacketed nylon tubing or hose sets for downwell use, and single tubes and hoses for surface runs to fit each project's needs. The jacketed nylon tubing is an exclusive developed by QED that encloses all of the nylon tubes inside a strippable nylon outer cover, a convenient package designed to provide lighter weight, increased chemical resistance, smoother handling and a smaller profile in the well. For applications where the tighter bend radius of hose is preferred, hose sets are offered in several sizes. Other hose and tube materials are available for special applications.

The choice of hose and tube connection fittings used on pumps, caps and other components can make an important difference in the ease and quality of installation and service on your project. That's why QED offers a variety of connecting fitting types and materials, including quick-connects in both brass and stainless steel.

Note: All QED tube, hose and fitting combinations are engineered specifically to provide user safety, high pullout strength, ease of installation, and leak tight connections for maximum assurance that the pumping system goes in right and stays trouble-free. It is especially important that the mating diameters and the tolerances of fittings, tubes and hoses be carefully controlled to ensure a fit that is snug yet doesn’t damage the hose or tube due to excessive stretching. Don't trust your project to general purpose tubing, hose, and fittings that weren't specifically designed to work together.

### Advantages

- All dimensions of QED tube, hose and fittings are carefully designed and controlled to ensure high flow capacity, easy assembly, high pullout strength and leak-tight connections
- Innovative jacketed nylon tubing is highly regarded by experienced users for its light weight, smooth profile and ease of handling
- QED offers an unmatched range of connector fitting options to make installation and maintenance easier and more efficient

Hundreds of wellhead cap and flange combinations are available from QED on a standard and custom basis to fit site needs and ease installation and maintenance. The table below lists some of our most commonly chosen wellhead assemblies. Our assemblies are based on the know-how gained through our 20 years experience and thousands of installations. Besides connecting to the pump tubing or hose, wellhead assemblies have to be designed for safety, equipment support strength, pump level adjustment, access for data and sample collection, and durability. Call us for more detailed information.

### Quick connect fitting
available in brass or stainless steel

### Compression fitting for pass-through hose or tubing. Available in nylon

Cycle Counter

The Cycle Counter detects and displays each AutoPump cycle via the pulse of air that occurs in the supply line. Since the liquid volume delivered by each pump cycle is relatively consistent for a given well condition, the total liquid volume delivered can be monitored with these cycle counts. An important advantage of the Cycle Counter method is its long-term reliability and low maintenance, since it requires no contact with the pumped fluid and no extra components in the liquid flow path. Cycle Counters can also be ordered with an electronic pulse output to support automated flow data collection.

Cycle Counter Specifications

**Type:** Magnetic piston/spring  
**Readout:** Direct digital (remote option), non-resettable  
**Maximum Pressure:** 200 psi (14 kg/cm²)  
**End options:** NPT, barb, quick connect
Filter regulators
Filter regulators are recommended for each pump at the wellhead to economize on system air consumption, allow control of pump flow rate, and reduce service needs caused by air system debris and contaminants. These high quality filter regulators are coated on the inside to prevent corrosion from condensed moisture. All QED well caps and flanges include mounting provisions for these filter regulators, and other mounting options are available.

Compressor Sizing
A compressed air supply is required to power AutoPumps. Estimation of the fluid flow rates and air consumption of the AutoPumps and sizing the fluid lines, air lines, and air compressor involves a number of factors. Our application specialists are ready to assist you.

The flow rates and air consumption for the AutoPumps can be compared by using the charts provided in this catalog for each model. The flow rate and air use curves in this catalog are based on pumping to atmospheric pressure at the wellhead, and do not take into account any liquid piping system backpressures due to elevation changes or fluid friction.

Finally, there are some initial guidelines for air compressors. Most importantly, follow all application guidelines of the compressor manufacturer. A piston compressor may be a start / stop type or a constant run type. The tank (receiver) must be large enough, particularly for the start / stop type. The motor should not turn on more times an hour than recommended by the manufacturer. And start/stop compressors are typically assigned a 50% maximum duty cycle, meaning that the compressor is sized to provide twice the maximum air demand of the entire AutoPump system.

Rotary screw compressors are designed for constant operation, and so are sized to just slightly exceed the maximum air supply requirement; it is recommended that rotary screw compressors not be grossly oversized because some types may be damaged by continued operation at low partial capacity.
QED’s Tank-Full Shutoff senses when your recovery tank is full and automatically shuts off the pump air supply. It is all pneumatic for safety, and includes two independent level detection methods for failsafe operation. The Tank-Full Shutoff threads into standard 2” NPT fittings on drums and tanks.

**Tank Full Shutoff Specifications:**
- **Power Supply:** Fully pneumatic
- **Level Sensor Type:** Dual; Bubbler tube and float switch
- **Air Usage:** 0.7 scfm @ 80 psi (19.8 lpm @ 5.6 kg/cm²)
- **Tank Connection:** 2-inch male NPT

**Dual-Sensor Tank-Full Shut-Off (TFSO) System**
- Wall Mounting Control Panel: 12” x 14” x 11” (30.5cm x 35.6 cm x 27.9 cm) (20 lbs.) (9.1 kg)
- Air Supply To Pumps And / Or Other Control Panels
- Dual TFSO Sensor Hose
- Air Filters / Regulators
- Additional Single Sensor TFSO Units Can Be Added To The System
- Optional TFSO Unit Lengths Are Available For Different Tank Configurations
- Standard TFSO Unit
- Wall Mounting Control Panel: 12” x 14” x 11” (30.5cm x 35.6 cm x 27.9 cm) (20 lbs.) (9.1 kg)

QED AutoPump Warranty Period Summary

Following is a summary of the warranty periods only for QED AutoPumps and accessories; this IS NOT the complete warranty. Contact QED for a copy of the complete warranty.

1. AP4+ AutoPumps (Long and Short lengths; Top and Bottom Inlets)
   warranted for five (5) years: 100% materials and workmanship.
   Low-Drawdown AutoPumps are warranted for one (1) year: 100% materials and workmanship.

2. AP3 AutoPumps (Long and Short lengths; Top and Bottom Inlets)
   warranted for two (2) years: 100% materials and workmanship.

3. AP2 AutoPumps (Long and Short lengths; Top and Bottom Inlets)
   warranted for one (1) year: 100% materials and workmanship.

4. Hoses, Tubing, Fittings, Well Caps and Flanges
   warranted for one (1) year: 100% materials and workmanship.
   There will be no warranty for application or material compatibility.

5. Pneumatic Data Modules / Logic Control Panels
   warranted for one (1) year: 100% materials and workmanship.

6. Parts and Repairs
   warranted for ninety (90) days: 100% materials and workmanship; when repairs are performed by QED or its appointed agent; from date of repair or for the full term of the original warranty, whichever is longer. Separately sold parts are warranted for ninety (90) days: 100% materials and workmanship.
Beyond the Pumps...

Success with a pumping system involves more than just the pumps. Over 20 years of specialized air-powered pumping experience on thousands of sites with a broad range of applications and groundwater issues has allowed us to develop unequalled expertise and problem solving capabilities.

QED technical experts will work with you on identifying the relevant site information to assure meeting your remediation and landfill pumping objectives. The equipment will be selected to meet your site-specific application.

Accessories

- Downwell hose and tubing
- An array of connectors and fittings for ease of installation and service
- Mix of wellhead assemblies to meet site-specific needs
- Fluid discharge and air supply piping layouts and components
- Tank-full shut-off and other safety items and features
- Pump cycle counters
- Custom requirements

Call us at **1-800-624-2026** for prompt, expert assistance on your pumping project needs.
